- ◆ **Membership groups identify different levels of access for different types of members.**
- ◆ **Secure your members' loyalty with reward points, zip downloads and favorites.**

Here are just some features you will find in PaySiteCMS 5.0:

Users & Content

An extensive variety of content types including in addition to the 3 major formats - videos, pictures and feeds. All content types work together to help you build a site where all related content is connected.

The following content types are supported in PaySiteCMS 5.0:

- Picture sets
- Video sets
- DVDs
- Audio Stories
- Text Stories
- 3rd Party Feeds.

By enabling user submitted content on your site you bring a whole new level of interactivity to your users. Allow your site to grow into an online community where professional content is available right along side real amateur content.

Membership groups identify different levels of access for different types of members. Create multiple membership groups for your sites and give members extra features when they pay more. Enable certain bitrates for premium members only, give them new content sooner or give them access to a whole new set of features.

Reward your members' loyalty with reward points to offset against future membership fees. Use zippy and favorites to let your members download all their favorite content in less time. Members' reward points can be retrieved and set using any external application for integration with rewards stores, affiliate program and more.

Complete multilingual feature set ensures your paysite dominates the world market by reaching out to a global audience. By using a strict template tag format your users language choice can be easily propagated across all elements of the site including images, static text and content properties.

The PaySiteCMS 5.0 Customer Service Relations Module (CSR) encourages members to communicate with the site owners to report bugs, make suggestions or encourage member loyalty. The CSR is seamlessly integrated into the system and provides an easy to use ticket interface that experienced and new users alike will find easy to understand.

Admin

Comprehensive, automated transcoding of video, pictures, thumbnails, previews and trailers. All created to your exact specification to perfectly suit your requirements. Providing high quality source files allows the system to automatically generate the requested formats without any manual intervention. Additionally, using our simple video format manager, new and emerging video codecs can be quickly integrated or existing transcoding parameters tuned to your liking.

The following video formats are included as standard for video transcoding:

- DV
- MPEG-1 (VCD) and MPEG-2 (SVCD/DVD/DVB) video
- MPEG-4 (all variants) including DivX , OpenDivX (DivX4), DivX 5 (Pro), XviD
- Windows Media Video 7/8
- Windows Media Video 9
- RealVideo 1.0, 2.0 (G2)
- RealVideo 3.0 (RP8), 4.0 (RP9)
- 3ivx
- MPEG-4 (IPOD & PSP)
- Flash Video with random seeking & many more!

Powerful keyword tagging providing the capability to accurately search and retrieve related content, linked content. Included with PaySiteCMS 5.0 is mature keywords system including over 1000 predefined keywords in a categorized hierarchy. In addition to being able to create your own keywords this enables any and all content to be accurately tagged for identification by all your content editors as well as your site users. If you don't have the resources to accurately tag your content then give your members the power to identify content for themselves.

Scheduled publishing providing asynchronous content encoding, editing and publishing. Maximize your human resources by individually assigning encoding, editing and publishing responsibilities.

Current 2257 legislations requires at least two forms of identification for all models appearing on your website. Using the PaySiteCMS 5.0 model manager ensures that not only can your members enjoy the best viewing experience when searching for their favorite models, but your legal department can receive daily dumps of all model identification data to store in your office in the event that you are asked to provide this data.

Deployment

Developed in PHP and MySQL ensuring maximum compatibility with your other applications and allowing you to leverage the diverse skill pool available to work with these technologies. Our choice to use PHP was largely based on this and the recent release of PHP 5 cements our commitment to using PHP for PaySiteCMS 5.0. The recent stabilization of MySQL 5.x enables many features that allow us to support your backend with an extremely competent data storage system.

Smarty templates and web-based editor with versioning provide the programmer and template designer with a wealth of tools to automate tasks commonly dealt with at the presentation layer of an application. Smarty is not a simple tag-replacing template engine, its focus is on quick and painless development and deployment, while maintaining high-performance, scalability, security and future growth.

Growth

Take advantage of the extensive time spent on preparing content for your first site by adding unlimited sites and template sets, then publishing content to your chosen destination. Just create a new design for your site and publish your existing content to the new site.

Employing the separate content delivery system your sites can scale to serve content from unlimited storage resources and even deliver the same content from different locations based on member geography. By providing full integration with the PaySiteCMS 5.0 authentication scheme whilst fully supporting resumable downloads and download managers your sites have the power to grow beyond your highest expectations.

Password Trojan 4.0 protects your site from password hacking, brute-forcing and account sharing. Limit your members by the number of simultaneous logins, downloads, the frequency of logins, the geographical distribution of logins and more.
