

PaySiteCMS 5.0 is an advanced content management system designed to meet the needs of ambitious adult paysites.

PaySiteCMS 5.0 is an advanced content management system designed to meet the needs of ambitious adult paysites. A content management system allows you to focus your resources on providing your members with high quality content without worrying about the process of ripping, editing and publishing individual pictures and video. Your content is managed via a streamlined administration interface; through a combination of automated transcoding, a flexible content property editor and a comprehensive multi-site scheduled publishing system, your site will be easy to manage whether you have 100 gigs of content or 100 terabytes.

Extensive variety of content types including video, pictures and feeds.

The following content types are supported in PaySiteCMS 5.0:

- Picture sets
- Video sets
- DVDs
- Audio Stories
- Text Stories
- 3rd Party Feeds

User submitted content enables your paysite to develop into an online community.

User submitted content will revolutionize your site, allow you to develop online communities, and allow professional content to coexist with amateur content in the same unique environment. User submitted content allows your members to submit media in any of the supported content types and manage their own keywords, properties and more. Combined with our supported Flash Video codec your site can become the next YouTube™, working within a traditional per month or pay per view business model.

Comprehensive, automated transcoding of video, pictures, thumbnails, previews and trailers.

A fundamental element of a powerful content management system is the ability to offer content from a variety of sources to a variety of target audiences. PaySiteCMS 5.0 naturally includes powerful transcoding capabilities to minimize the effort needed to provide your target audience with a wide range of video and image formats. Providing high quality source files allows the system to automatically generate the requested formats without any manual intervention. Additionally, using our simple video format manager, new and emerging video codecs can be quickly integrated or existing transcoding parameters tuned to your liking.

Furthermore, your content can be converted into thumbnails, previews, trailers and clips. Image galleries can be built from your videos according to the settings you specify, and previews can be used by guests, members and affiliates.

The following video formats are included as standard for video transcoding:

- DV
- MPEG-1 (VCD) and MPEG-2 (SVCD/DVD/DVB) video
- MPEG-4 in all variants including DivX , OpenDivX (DivX4), DivX 5 (Pro), XviD
- Windows Media Video 7/8
- Windows Media Video 9
- RealVideo 1.0, 2.0 (G2)
- RealVideo 3.0 (RP8), 4.0 (RP9)
- 3ivx
- MPEG-4 (IPOD & PSP)
- Flash Video with random seeking.

Many more - full list available on request.

Powerful keyword tagging facilitating powerful searching capabilities

Included with PaySiteCMS 5.0 is a mature keyword system containing over 1000 predefined keywords in a categorized hierarchy. In addition to the ability to create your own keywords this enables any and all content to be accurately tagged for identification by all your content editors as well as your site users. Use keywords to create connections between related content that can be used to enrich your members' experience. If you don't have the resources to accurately tag your content, give your members the power to identify content for themselves. By enabling user keyword tagging, you can let your members choose their own keywords to identify content, and via the keyword moderation admin interface you can approve these keywords for all members to see.

Scheduled publishing providing asynchronous content encoding, editing and publishing.

The three essential steps involved in placing content on your site are clearly separated allowing asynchronous encoding, editing and publishing. Leverage this feature to allow your rippers to focus on capturing your source video as MPEG2 and uploading these high quality files for automated transcoding. Allow your experienced editors to add all required properties to your content that will be used on your site to provide the best viewing experience, and finally let your chief editor/publisher decide when and where to release your prepared content. Alternatively, for smaller organizations, one or two people can perform all these steps - the choice is yours.

Complete support for multiple languages throughout all elements of the system.

Reaching out to a global audience will certainly give your site the edge it needs to succeed in an environment where competition is at an all-time high. After setting the base language for your site and entering content properties, an expert language management interface enables your linguists to create translations for every piece of text or alternatively for an all-in-one solution that adds your translations right from the content editor. By using a strict template tag format your users' language choice can be easily propagated across all elements of the site including images, static text and content properties.

Create unlimited sites from one content pool.

After investing considerable time preparing your content for publishing, you will naturally want to reuse this information to create more sites and build your own affiliate program. Just create a new design for your site and publish your existing content to the new site. Use this feature to build a huge network of sites from one pool of content and even let your members access all sites with one flat fee.

Flexible content delivery ensuring infinite scalability and maximal user satisfaction.

Employing the separate content delivery system, your sites can scale to serve content from unlimited storage resources and even deliver the same content from different locations based on member geography. By providing full integration with the PaySiteCMS 5.0 authentication scheme while fully supporting resumable downloads and download managers, your sites have the power to grow beyond your highest expectations.

Developed in PHP with MySQL.

PHP is undeniably at the forefront of web application development with a huge skill pool available your other applications are probably already implemented in PHP. Our choice to use PHP was largely based on this and the recent release of PHP 5 cements our commitment to using PHP for PaySiteCMS 5.0. The recent stabilization of MySQL 5.x enables many features that allow us to support your backend with an extremely competent data storage system. By building on these cutting edge of web based technologies we leave no room for compromise, your site will run on top of a system created by the most competent PHP developers and MySQL specialists.

Smarty templates and web-based editor with versioning.

Smarty is, in its simplest form, a template engine, but more than this it's a template/presentation framework integrating with our PHP development framework to provide extremely flexible interfaces. Smarty provides the programmer and template designer with a wealth of tools to automate tasks commonly dealt with at the presentation layer of an application. Smarty is not a simple tag-replacing template engine; its focus is on quick and painless development and deployment while maintaining high-performance, scalability, security and future growth.

Digital management of 2257 records.

Current 2257 legislations requires at least two forms of identification for all models appearing on your website. With the PaySiteCMS 5.0 model manager, not only can your members enjoy the best viewing experience when searching for their favorite models, but your legal department can receive daily dumps of all model identification data to store in your office in the event that you are asked to provide this data.

Encoded with Zend Guard and fully compatible with eAccelerator.

PaySiteCMS 5.0 is encoded with Zend Guard to protect us from reverse engineering, unauthorized customization, unlicensed use and redistribution. This is fully compatible with eAccelerator, an essential PHP extension that ensures your servers are performing optimally, therefore decreasing your costs per member.

Powerful administration tool with extensive search capabilities.

A system as powerful and extensive as PaySiteCMS 5.0 leads to a vast pool of information that can become difficult to access quickly without memorizing every aspect of the interface necessary to find information relevant to each feature. PaySiteCMS 5.0 autonomously indexes every piece of important metadata, allowing you to quickly locate that DVD review you wanted to moderate, find that scene that had a typo in the description, find that admin page where you can edit banned IPs and so much more. Information is indexed transparently and in the background; as soon as a change is made it is immediately available, making searches provide up-to-the-moment accuracy.

Password Trojan 4.0 protects your site from password hacking, brute-forcing and account sharing.

Protecting your site from password sharing is an important step in preventing skyrocketing bandwidth bills. A unique integration with Password Trojan provides you with all you need to defend yourself from this lost revenue. Password Trojan is an optional service you can select during purchase. PaySiteCMS 5.0 will be delivered with Password Trojan preconfigured in safe mode, which stops all but the most persistent password sharers and avoids any incompatibilities with genuine members.

FHGenie integrates exclusively with PaySiteCMS 5.0 to generate picture and video galleries using your PaySiteCMS 5.0 content.

FHGenie is a standalone free hosted gallery generator enjoying exclusive integration with PaySiteCMS 5.0 to facilitate rapid deployment of unlimited galleries using your PaySiteCMS 5.0 content. Generated galleries are instantly available and can be seamlessly integrated into your affiliate program for use by affiliates. FHGenie is also available for purchase separately.

PaySiteCounter integration for unique statistics.

PaySiteCounter is the unique server side counter technology exclusively available in PaySiteCMS 5.0 to accurately display visitor statistics without the aid of 3rd party HTML counters. PaySiteCounter informs you of everything you need to know about your visitors, how they found you and how they interact with your site. This exclusive server side counter presents you with all the statistics you would expect from other 3rd party counters with the additional benefits of providing PaySiteCMS 5.0-specific statistics, for example, content popularity, bandwidth usage and popular video formats.

Customer service relations are comprehensively managed via a simple yet effective integrated ticket system.

The PaySiteCMS 5.0 CSR encourages members to communicate with site owners to report bugs or make suggestions, strengthening member loyalty. The CSR is seamlessly integrated into the system and provides an easy-to-use ticket interface that experienced and new users alike will find very convenient. The customer service relations system allows visitors to your site to easily communicate positive and negative feedback.

Membership groups identify different levels of access for different types of members.

Create multiple membership groups for your sites and give members extra features when they pay more. Enable certain features for premium members only, give them new content sooner or provide them with access to a whole new set of features.

User preferences let your members choose the site they want to see.

With options such as screen resolution, bitrate, language, design and colors, your members can define what they see and how they see it. Whether your members have slow connections and large monitors or fast connections and small monitors, everything can be tuned to provide the optimal viewing experience.

Secure your members' loyalty with reward points, zippy and favorites.

Retaining members after their initial signup is the primary goal in paysite profitability, and an important step in bringing you closer to this objective is showing your members long-term benefits. Assign reward points for actions such as submitting reviews, reporting bugs, or simply downloading movies. Members' reward points can be retrieved and set using any external application for integration with rewards stores, affiliate programs and more. Finally, use zippy and favorites to let your members download all their favorite content in less time.

PaySiteCMS 5.0 is built on the basis of AdultDesign.com 's proprietary web application framework.

An object-oriented development framework implemented in PHP 5, providing rapid application development through stable and tested classes built on common design patterns. The primary goal of enFrame is to provide our developers with a structured framework ensuring consistent development styles and allowing us to leverage common usage patterns through reusable classes.

enFrame integrates perfectly with the Smarty template engine. This gives webmasters working with PaySiteCMS 5.0 a wealth of tools to use for accurate presentation of data to the end user. Smarty is an open source template engine, which competently suits our clients' need, providing them the ability to harness the experience gained by the thousands of developers already familiar with Smarty.

PaySiteCMS 5.0 is available in 2 distinct versions:

Hosted PaySiteCMS 5.0
